

Identify the Constraints

Project Management

Time Plan

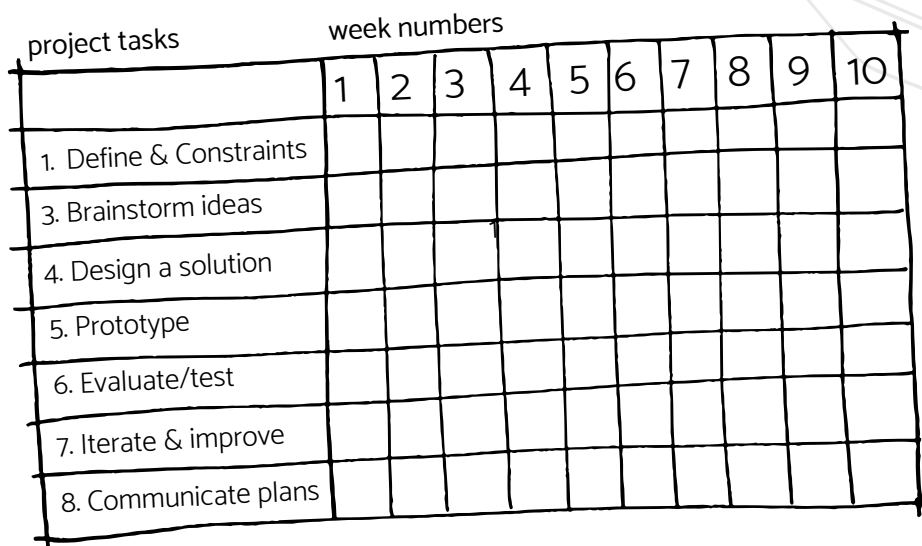

Gantt Chart

A Gantt chart is commonly used by industry as a tool in project planning. In the project shown (left) 'Iterate' and 'Communicate' are scheduled for the same week. Why might that be?

Challenge: Find out how long it took for NASA to put a person on the moon after President John F. Kennedy's famous speech to congress on space exploration?

Activity:

Try scheduling your own project in this blank Gantt chart (right). Your teacher will specify a project completion date. You may also be given a date for 'deliverables'. It could be that you report on your progress at agreed 'milestones'.

Action Plan

An action plan is a list of steps you plan to follow to complete a project. This is usually completed in sequential order and details what actions need to be taken to complete the project.

Activity:

Teams complete an action plan for the AVA Challenge.
